Get your stuff running.

Maximum productivity for your logistics – with Portable Conveyor Systems!

The Conveyor System That Brings Movement To Your Logistics

Schmalz's Portable Conveyor Systems variants Destuff-it™ and Restuff-it™ make logistics more efficient and ergonomic. Both systems can be used flexibly in different areas of logistics. The Destuff-it™ and Restuff-it™ systems

are designed for maximum ease of use – for smooth processes, less physical strain, and greater safety. Experience how Portable Conveyor Systems get your logistics moving!

Product Information

- The capacity of the Portable Conveyor Systems, with a maximum load of 75 kg, also allows large, heavy workpieces to be transported.
- The movable system head, which can be moved in all directions, reaches every position on the loading area with precision and can also be individually oriented to any height during operation.
- The various sensors and LED strips ensure safety and illumination.
- The modular belt with easily replaceable wear parts ensures lower operating costs and reduced downtime.
- The self-propelled system enables fast and flexible use in changing locations.
- The time-out function reduces energy consumption and is automatically activated when the operator platform has not been used for a long period of time.

Application of the Portable Conveyor Systems Variants

Thanks to the Portable Conveyor Systems variants Destuff-it™ and Restuff-it™, a wide variety of non-palletized workpieces such as packages, bags, carpet rolls, tires, and sensitive or fragile products can be efficiently loaded and unloaded into trucks, containers, or other logistics units.

Destuff-it™ system:

Unloading of logistics units

Restuff-it™ system:

Loading and unloading of logistics units

- Loading and unloading of trucks, containers, or swap bodies at goods receipt and output.
- Bidirectional transport of different workpieces from goods receipt to palletizing and back.

Portable Conveyor Systems – Get Your Stuff Running!

The Portable Conveyor Systems variants Destuff-it™ and Restuff-it™ offer a wide range of customer benefits, from increased productivity to improved health and safety for your employees.

Destuff-it™ and Restuff-it™ operators unload up to 50% faster than the traditional manual method using a step stool. As a result, throughput can be increased to handle up to 2.000 boxes per hour.

The flexible system head and movable operator platform ensure optimal positioning and thereby reduce the strain on employees during loading and unloading. Various sensors actively protect the operator. The result: reduced fatigue, muscle strain, and injury.

INCREASED PRODUCTIVITY

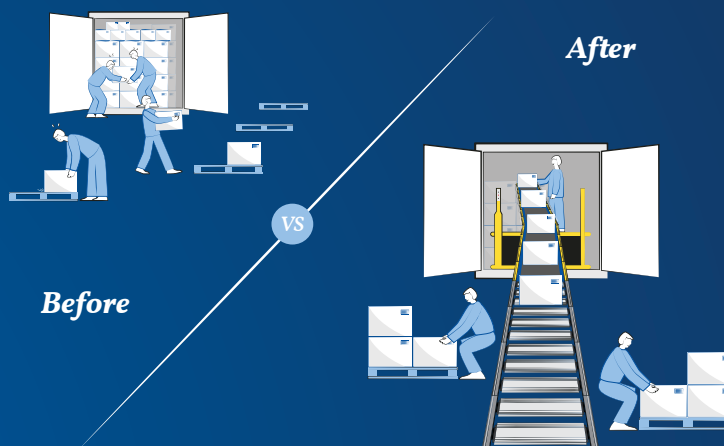

IMPROVE HEALTH AND SAFETY

Why a
Conveyor
is Worth

or System
thwhile

IMPROVE DOCK UTILIZATION

WORTHWHILE INVESTMENT

While the products are continuously transported on the conveyor belt, employees at the end of the line perform efficient sorting of the items and palletize them professionally.

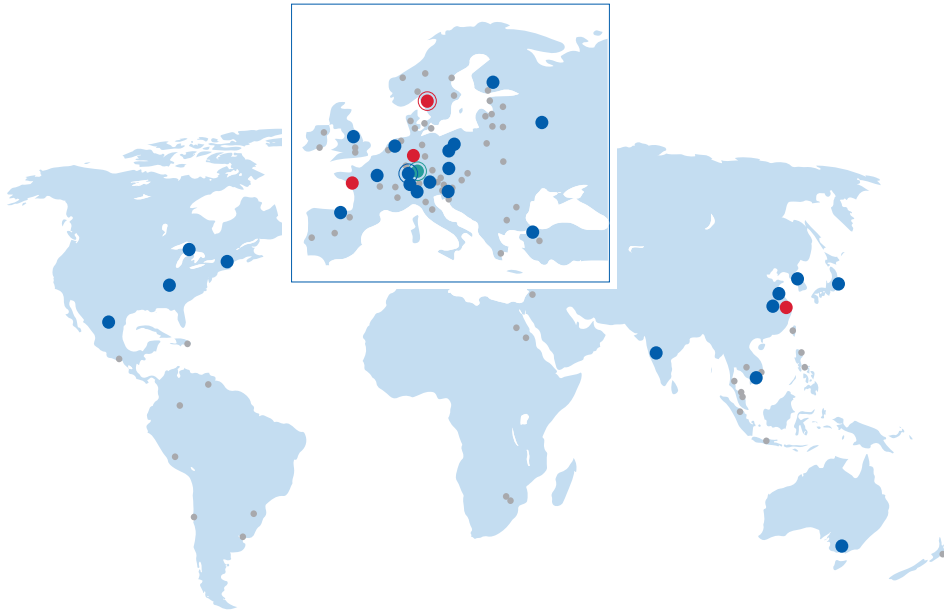

Customers doing more than two containers per day can see an ROI in under two years.
